DETAILED ACTION

Claims 1-19 are currently presented.

It is noted that a new Examiner has been assigned to this application. Any future correspondence regarding this application should be directed to the Examiner listed below.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 6-9, 11-14, and 16-19, drawn to a communication method for transmitting data from a server to a requesting computer, classified in class 709, subclass 203.
- II. Claims 5, 10, and 15, drawn to a communication method for transmitting data from a server to a requesting computer, classified in class 709, subclass 203.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation,

function, or effect. See MPEP 806.05(j). In the instant case, within invention I, a server limits the rate of transmission to a requesting computer by using a speed indication signal sent from a requesting computer whereas, within invention II, a requesting computer limits the rate of transmission of data from a server by generating a schedule using pause and resume transmission signals based on a user input speed setting at the requesting computer.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP 808.02), restriction for examination purposes as indicated is proper.
